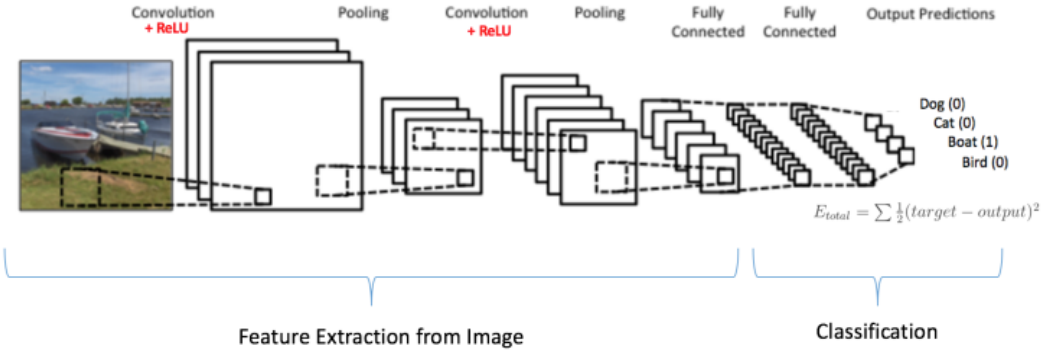
Convolutional Neural Network with TensorFlow

Lujun Jian

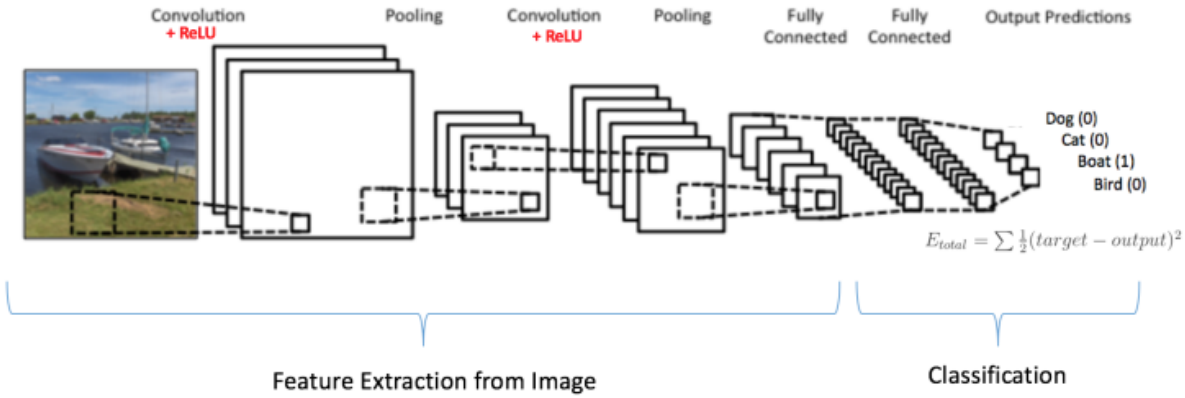
Motivation

- TensorFlow by Google
  - Open source library for mathematical computation, especially good for Machine Learning
  - Scalability - can be deployed to multiple CPUs/ GPUs
  - Data flow graph architecture
    - Node - computation/ function
    - Edges - multidimensional data (tensors)
- Convolutional Neural Network (CNN)



CNN - Supervised Learning

- Image classification with CNN - Supervised Learning
- In the training process, use backward propagation and gradient descend to update all the filter value and weights



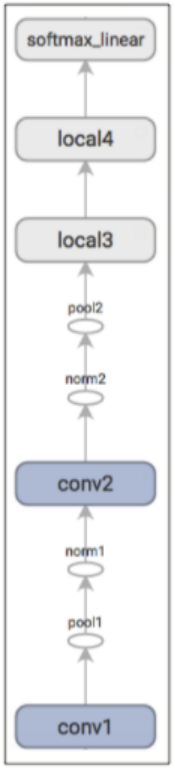
Data

- CIFAR-10
  - 60,000 32x32 colour images in 10 classes - 50,000 training data, 10,000 test data
  - Classes: airplane, automobile, bird, cat, deer, dog, frog, horse, ship, truck
  - In my project
    - 50,000 training images
    - 2,000 test images
    - Binary version of the file - each image is represented by 3073 bytes
      - 1 byte is the label: 0~9
      - 1024 byte of the red value
      - 1024 byte of the green value
      - 1024 byte of the blue value

```
<1 x label><3072 x pixel>
...
<1 x label><3072 x pixel>
```

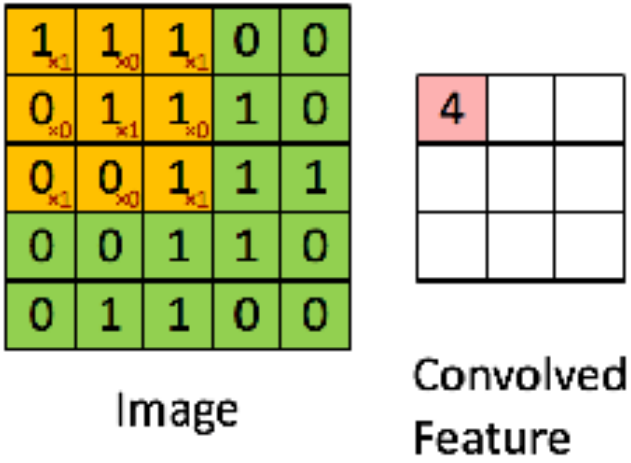
Methods - TensorFlow CNN Tutorial

Layer Name	Description
conv1	convolution and rectified linear activation.
pool1	max pooling.
norm1	local response normalization.
conv2	convolution and rectified linear activation.
norm2	local response normalization.
pool2	max pooling.
local3	fully connected layer with rectified linear activation.
local4	fully connected layer with rectified linear activation.
softmax_linear	linear transformation to produce logits.



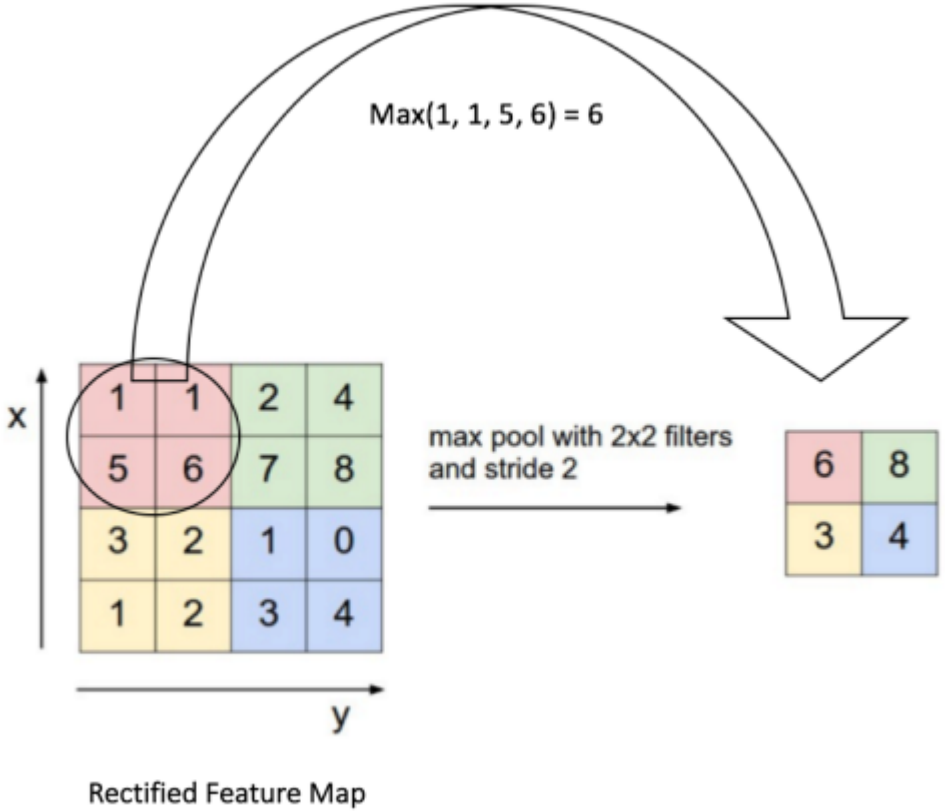
Convolution Layer

Image · Filter → Feature Map



Max Pooling Layer

Reduce dimension but retain important information

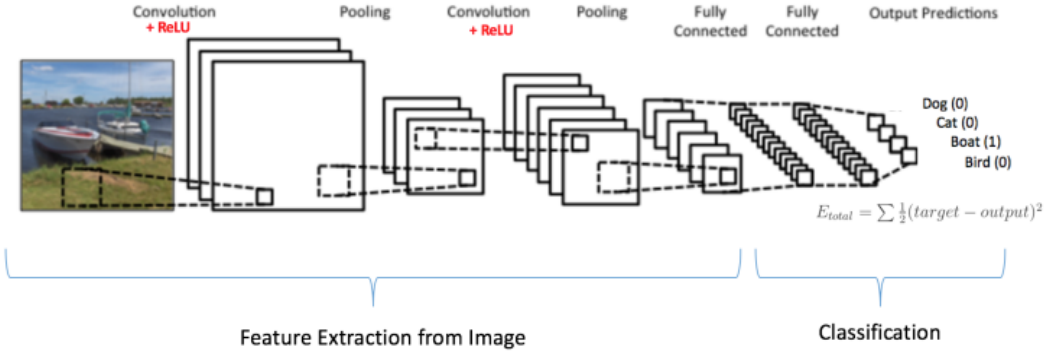


Location Response Normalization Layer

- Perform “lateral inhibition”
- Create a significant peak/ local maxima by subdue its neighbors
- Detect high frequency features with a large response to increase the sensory perception

Fully Connected Layer + Softmax

- “Fully Connected” - every neuron(computation) in the previous layer is connected to every neuron on the next layer
- To use the high-level features extracted by convolutional and pooling layers for classifying the input into the various classes
- Softmax is the multi-classes classifier function and the output probabilities will sum to one



Sample of the code

```
# conv1
with tf.variable_scope('conv1') as scope:
  kernel = _variable_with_weight_decay('weights',
                                       shape=[5, 5, 3, 64],
                                       stddev=5e-2,
                                       wd=0.0)
  conv = tf.nn.conv2d(images, kernel, [1, 1, 1, 1], padding='SAME')
  biases = _variable_on_cpu('biases', [64], tf.constant_initializer(0.0))
  pre_activation = tf.nn.bias_add(conv, biases)
  conv1 = tf.nn.relu(pre_activation, name=scope.name)
  _activation_summary(conv1)

# pool1
pool1 = tf.nn.max_pool(conv1, ksize=[1, 3, 3, 1], strides=[1, 2, 2, 1],
                       padding='SAME', name='pool1')
# norm1
norm1 = tf.nn.lrn(pool1, 4, bias=1.0, alpha=0.001 / 9.0, beta=0.75,
                  name='norm1')
```

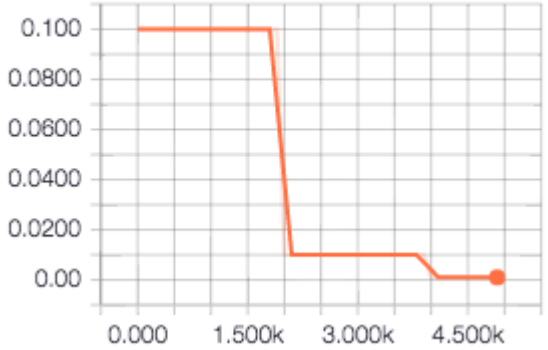
Sample of the code

```
# local3
with tf.variable_scope('local3') as scope:
  # Move everything into depth so we can perform a single matrix multiply.
  reshape = tf.reshape(pool2, [FLAGS.batch_size, -1])
  dim = reshape.get_shape()[1].value
  weights = _variable_with_weight_decay('weights', shape=[dim, 384],
                                        stddev=0.04, wd=0.004)
  biases = _variable_on_cpu('biases', [384], tf.constant_initializer(0.1))
  local3 = tf.nn.relu(tf.matmul(reshape, weights) + biases, name=scope.name)
  _activation_summary(local3)
```

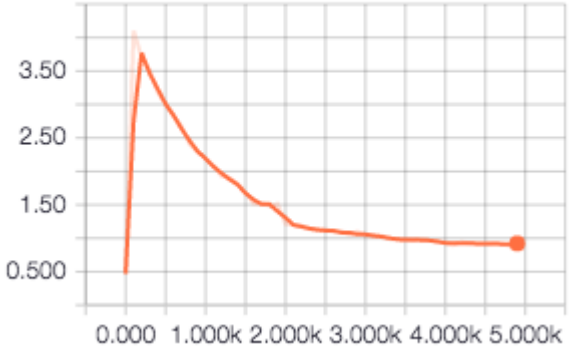
Result

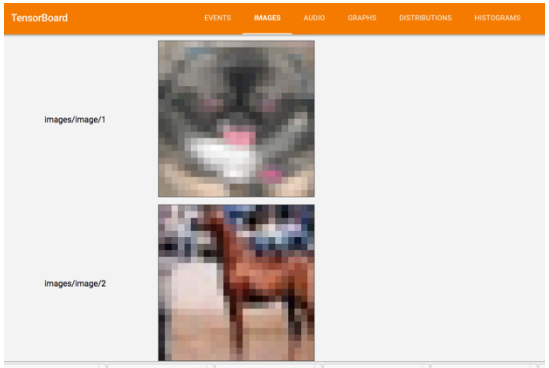
train images	max_step/ number of batches to run	batch size	num of epoch	num Epochs after learning rate decays	initial learning rate	learning rate decay factor	duration	final loss	test images	accuracy
50000	5000	128	12.8	never	0.1	0	1 hr 29 min	0.68	2000	0.75
50000	5000	128	12.8	5	0.1	0.1	1 hr 46 min	0.92	2000	0.745

learning_rate



total_loss





Interpretation & Future Works

- Goal: Increase the accuracy in limited steps
- Compare the accuracies with different params and architectures
  - Initial learning rate
  - Learning rate decay rate (*)
  - Number of epoch after learning rate starts decaying
  - Number of convolutional layers
  - Max steps
- TensorBoard - visualization of the learning (*)

Thank you!

Q & A!

Detecting Musical Patterns Using HMMs

Youyou Tian

CSC 390

Motivation

- Fast growth in digital music collection
- With this large span of music genres, how can listeners effectively categorize these music collections?

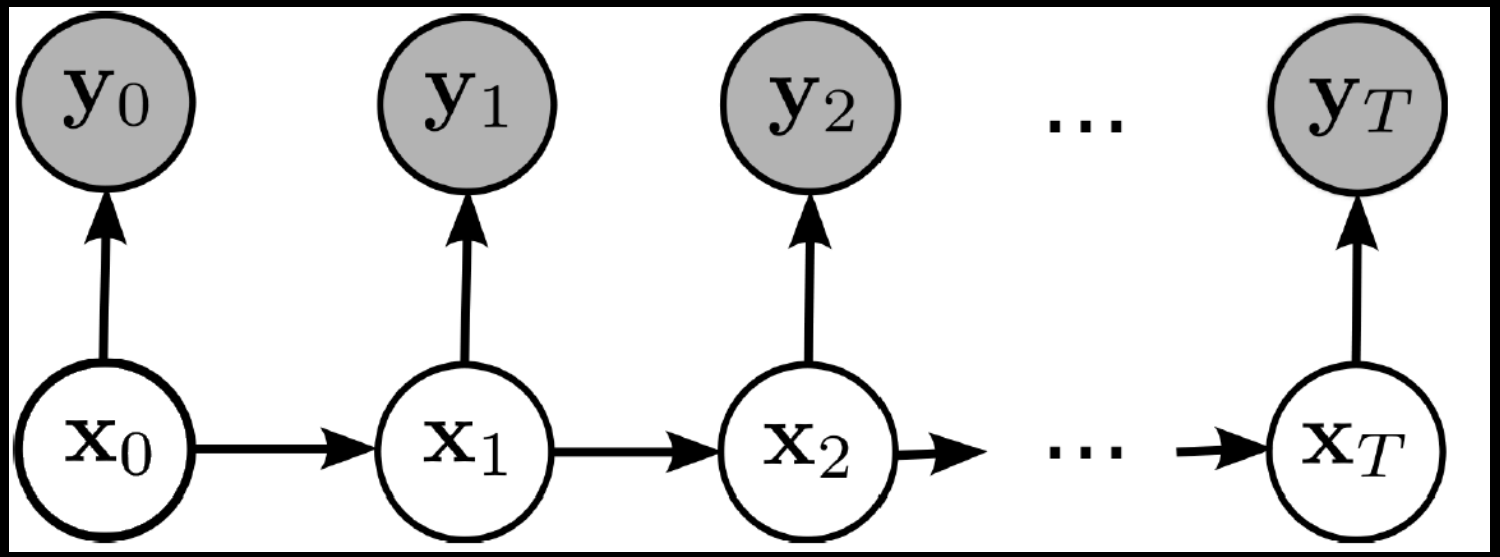
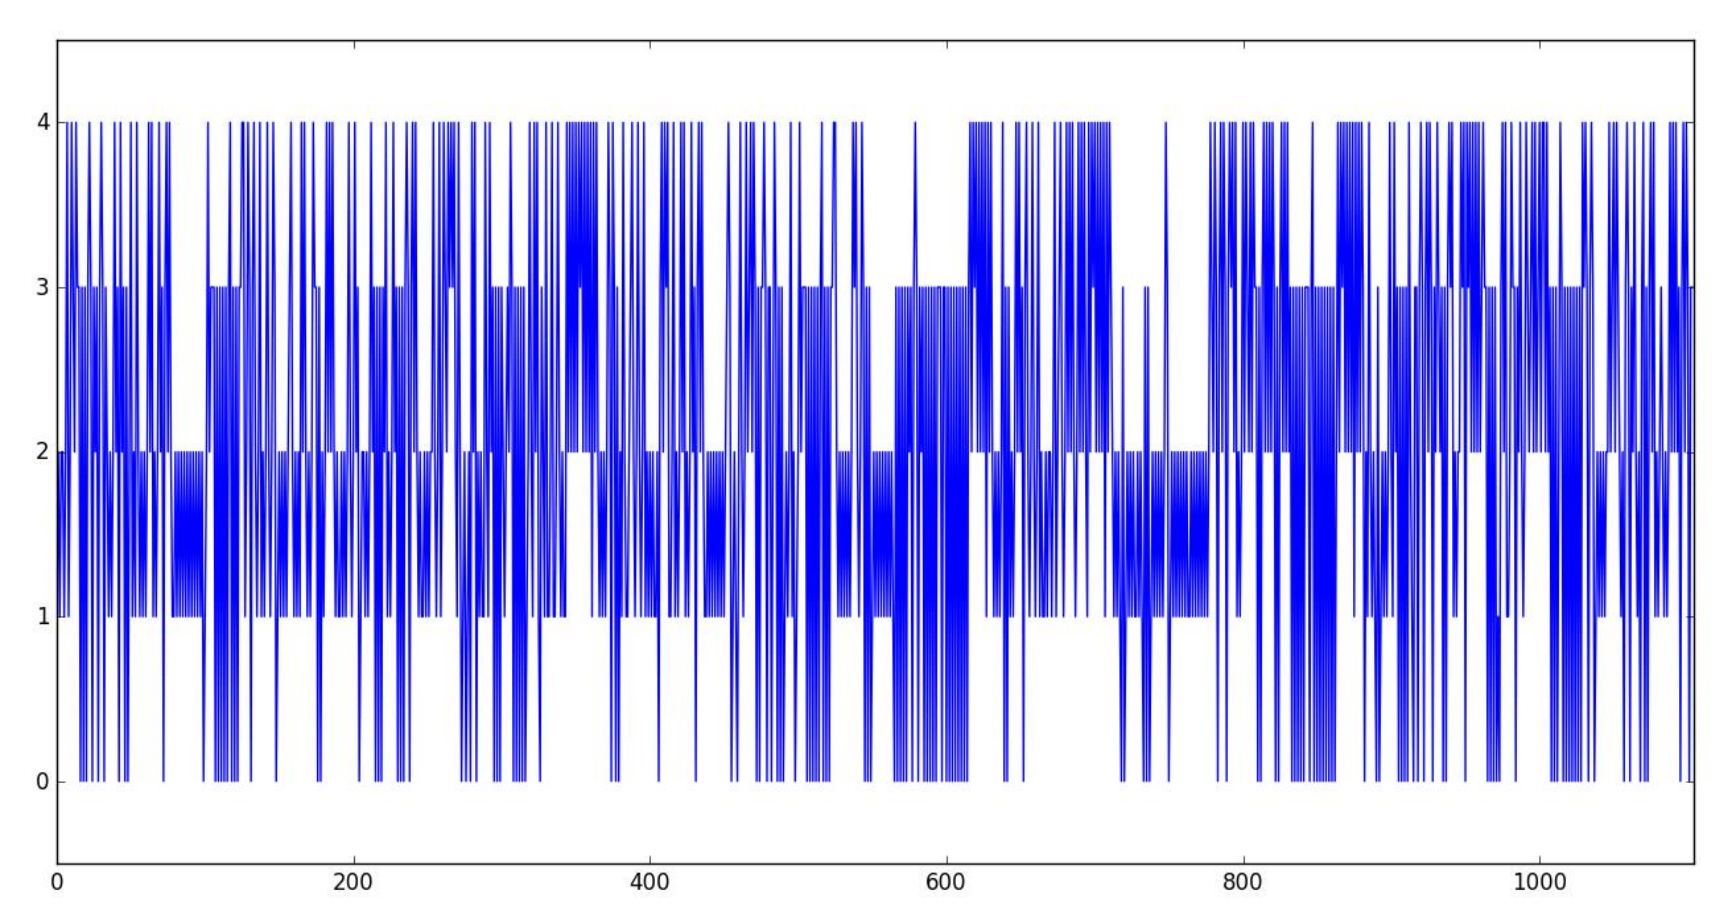
Multinomial HMM



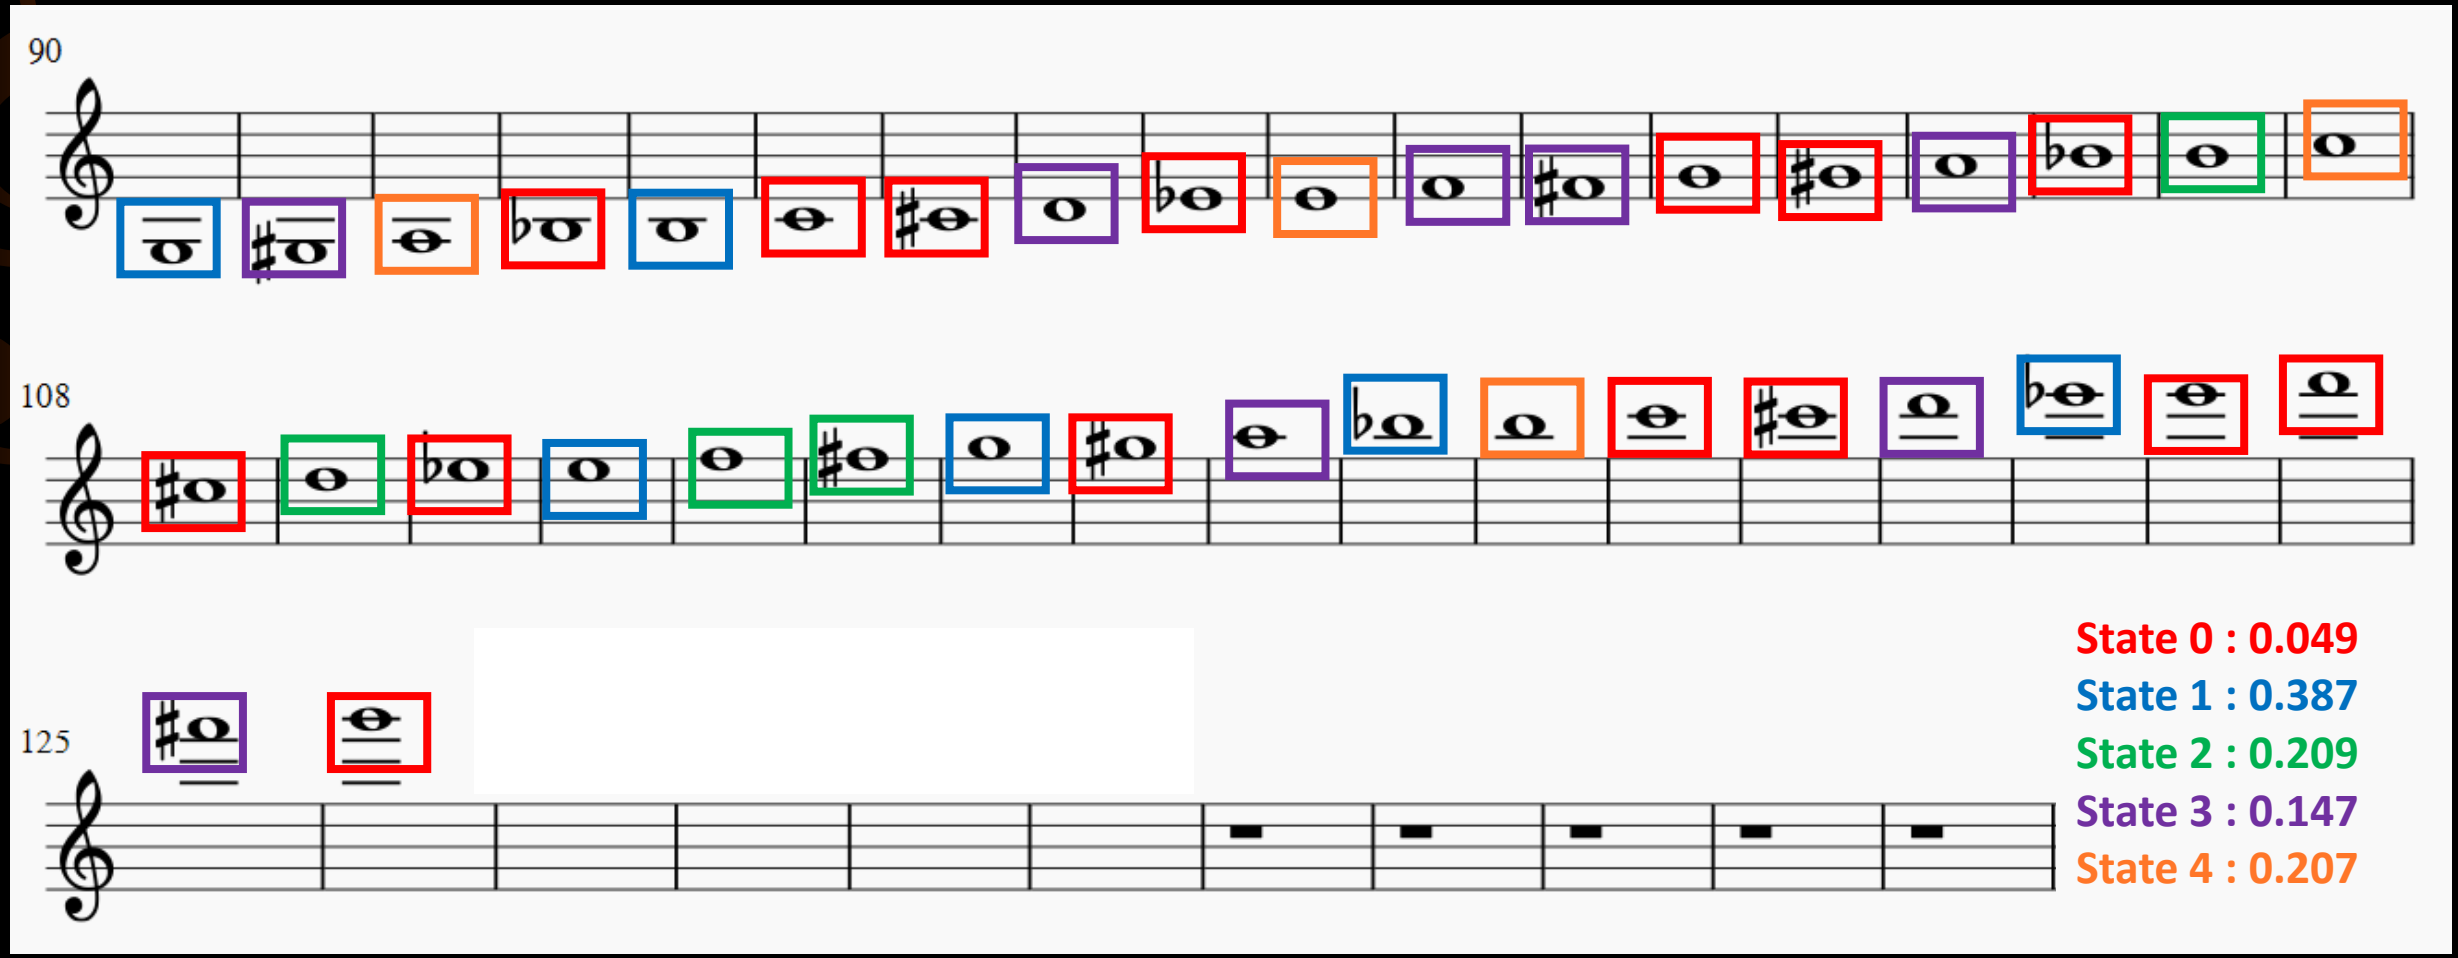
- Unsupervised Approach
- Assumes discrete time steps
- Uses Viterbi
- HMMLearn Package

Results



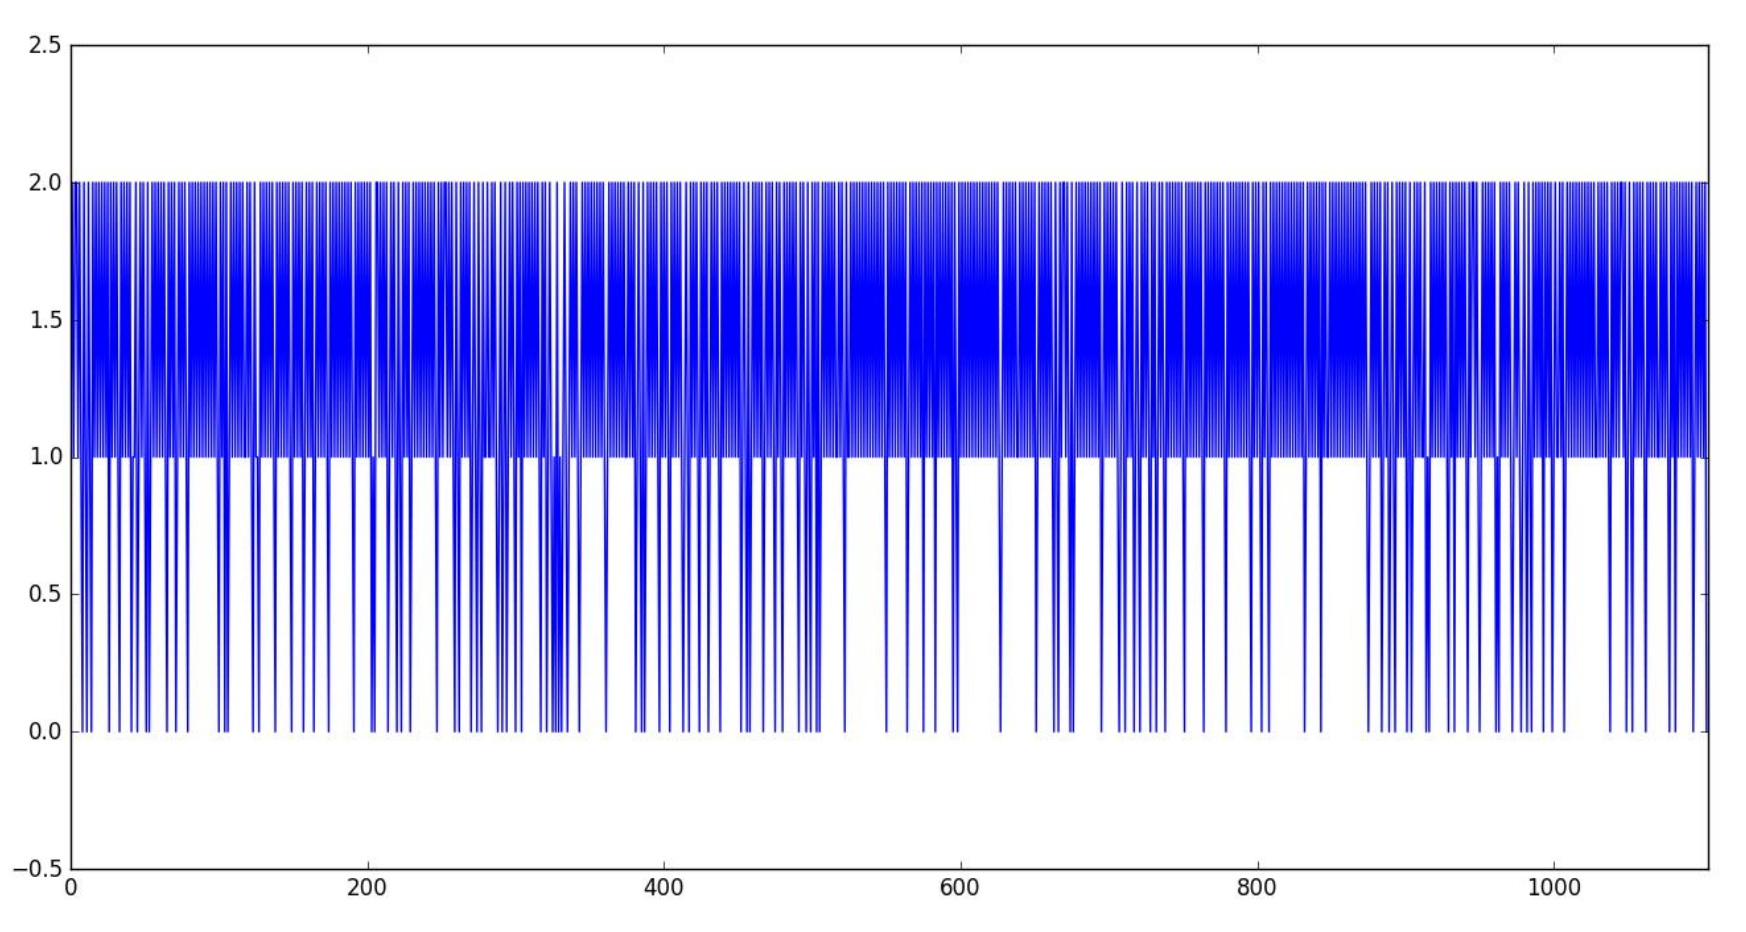
- Trained with 5 hidden layers
  - The 1st movement of the Bach A minor Concerto has about 5 repetitive motifs
- The HMM calculates states based on the previous note
- Can’t discern much

Results



90
108
125
State 0 : 0.049
State 1 : 0.387
State 2 : 0.209
State 3 : 0.147
State 4 : 0.207

Results



- Run HMM in the hidden states from prior
- Trained on 3 hidden layers

State 0 : [State 1]
State 1 : [State 0 , State 4]
State 2 : [State 2, State 3]

Future Work

- Parse data to be grouped by measures
- Run a N-gram model, which predicts based on the probability of multiple previous states
- Try other composers other than Bach

Questions?

- http://ieeexplore.ieee.org/document/4607732/?arnumber=4607732

Another NYC Data Analysis

but with **Citi Bike**

Jackie Byun CSC390

Motivation

- Increasing popularity of public bike sharing systems
- First personal experience with bike share was during summer internship in Chicago
- The entire process from membership, rental, check out & return time, etc. has now become automatic
- But unlike taxi (or Uber) data, Citi Bike includes demographic information about its riders

Data

Millions of data points for each month between 2013-2016

Chose 09/2016

tripduration	starttime	stoptime	start station	start station	start station	start station	end station i	end station n	end station	end station	bikeid	usertype	birth year	gender

- m = 1648856
- p = 5

Data

Five features: trip duration, start latitude, start longitude, stop latitude, stop longitude

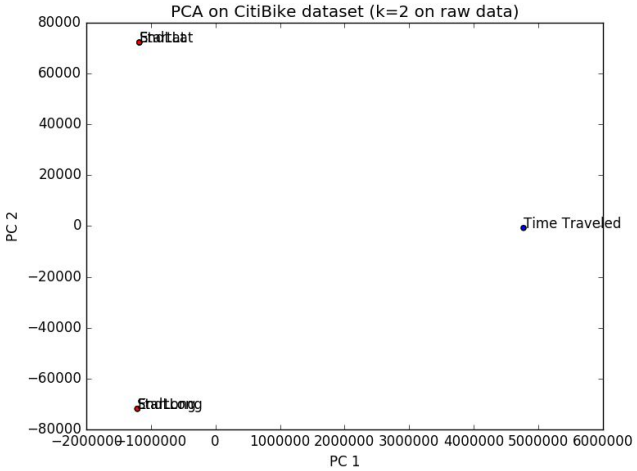
Looking for clustering patterns ➔ Unsupervised

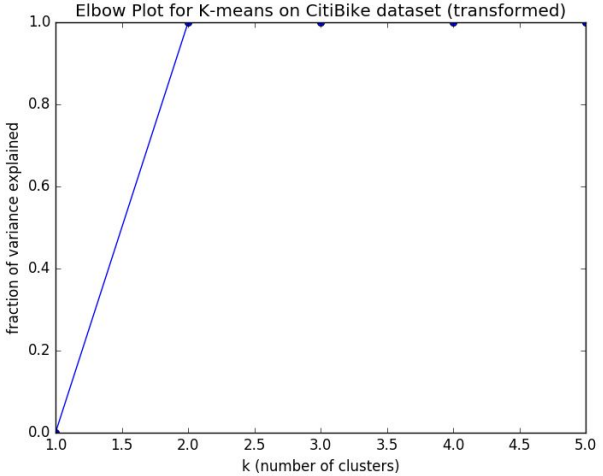
Use gender feature as a label to evaluate model afterwards

Methods

PCA ➔ results not meaningful in terms of visualization

Elbow plot ➔ shows k = 2





Methods

Matplotlib Basemap to map station data by latitude and longitude

```
from mpl_toolkits.basemap import Basemap
startlats = X[1]
startlongs = X[2]
m = Basemap(llcrnrlon=min(startlongs),llcrnrlat=min(startlats),urcrnrlon=max(startlongs),urcrnrlat=max(startlats),
            lat_ts=20,resolution='c',projection='merc',lon_0=startlongs[0],lat_0=startlats[0])
```

llcrnrlat,llcrnrlon,urcrnrlat,urcrnrlon

➜ are the lat/lon values of the lower left and upper right corners of the map

lat_ts ➜ the latitude of true scale.

resolution = 'c' ➜ means use crude resolution coastlines

Expected Outcomes and Challenges

Map visualization of the Citi Bike station locations

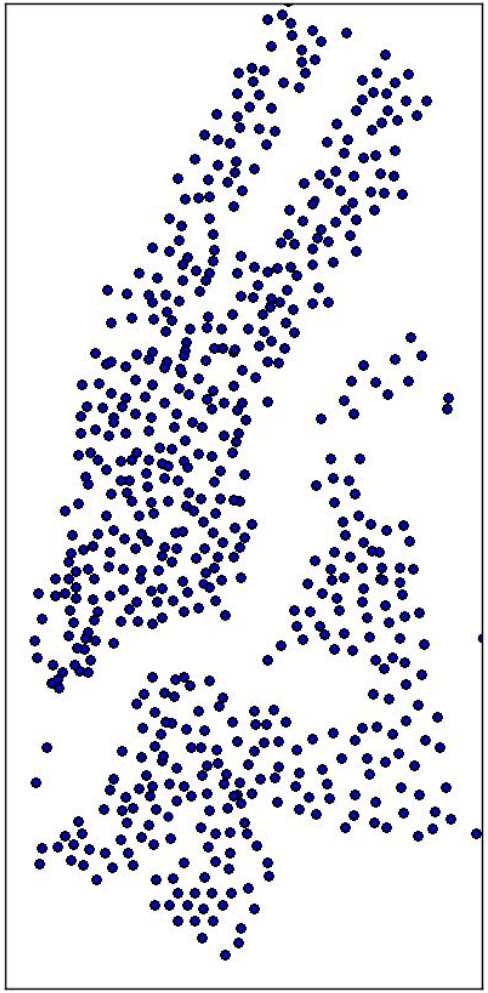
K-means clustering of data

Better understanding of rider demographics and use by areas in the city

Challenges: Preprocessing a very large dataset, fixed pick up and drop off locations obscure data point individuality and makes it difficult to find a pattern

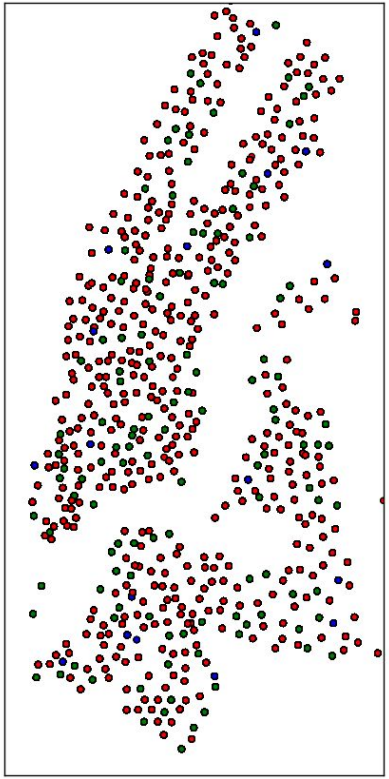
Expected Outcomes

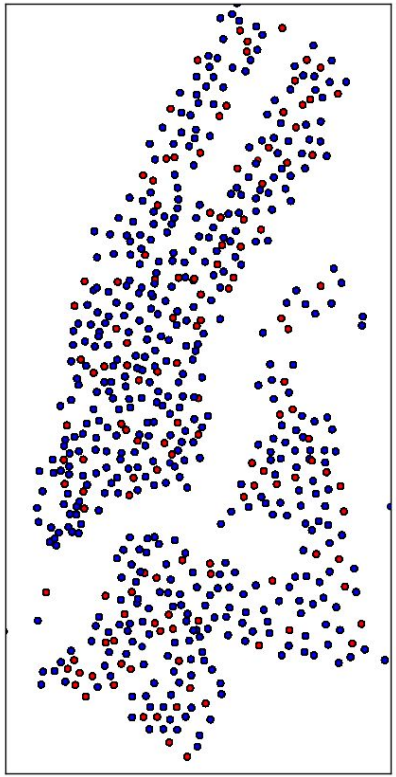
Map visualization of the Citi Bike station locations



Expected Outcomes

Colored by gender





Colored by k=2

Future Directions

Color based on the gender majority seen at each station

Interesting to find out more about distinct commuting patterns: what are the most popular roads?

Analysis with specific times: rush hour vs accidents

What neighborhoods have the highest and lowest ratios of Citi Bike rides compared to taxi or Uber trips? And are there any commutes where it’s faster to take a Citi Bike than a taxi/Uber during rush hour traffic?

Underestimate how much easier it is to uniquely identify people based on the additional demographic data that is made available to the public

Thank You and Questions?

K means and PCA on individual household electricity power consumption data

Presentation by Karen Stefany Diaz

Motivation / Why is it important?

- I wanted to create a visual representation of a data set for this final project ☺
- Data set used applied to a product used in our daily lives
  - Data records household consumption of power over 4 years
- Can assist in seeing trends on energy usage and reduce the amount of energy we use
- Knowing when peak times can put a lot of strain on system
- Interest now on how to distribute systems (power grid) efficiently
- Can be useful in electricity load forecasting
  - Important aspect of power systems planning and operation
  - Forecasting permits using energy storage systems to decrease cost of energy for consumers

Supervised vs Unsupervised

- Unsupervised methods in project
  - K means + PCA
- No true labels were provided with Data Set
- Only information provided were the measurements and the date +time of each test
  - date +time more of a special feature to look at afterward, not a label to be predicted

Data

- Data provided from UCI Machine Learning Repository
- Measurements of electric power consumption in one household with a one-minute sampling rate over a period of almost 4 years.
- Different electrical quantities and some sub-metering values are available.

Data – Data Set Information

- This archive contains 2,075,259 measurements gathered between December 2006 and November 2010 (47 months).
- Represents the active energy consumed every minute (in watt hour) in the household by electrical equipment measured in sub-meterings 1, 2 and 3.
- The dataset contains some missing values in the measurements. All calendar timestamps are present in the dataset but for some timestamps, the measurement values are missing:
- A missing value is represented by the absence of value between two consecutive semi-colon attribute separators.

Data – Attribute Information

```

Attribute Information (left to right):

1.date: dd/mm/yyyy

2.time: time in format hh:mm:ss

3.global_active_power: household global minute-averaged active power (in kilowatt)

4.global_reactive_power: household global minute-averaged reactive power (in kilowatt)

5.voltage: minute-averaged voltage (in volt)
6.global_intensity: household global minute-averaged current intensity (in ampere)

7.sub_metering_1: energy sub-metering No. 1 (in watt-hour of active energy). It **corresponds to the kitchen**, containing mainly a dishwasher, an oven and a microwave (hot plates are not electric but gas powered).

8.sub_metering_2: energy sub-metering No. 2 (in watt-hour of active energy). It **corresponds to the laundry room**, containing a washing-machine, a tumble-drier, a refrigerator and a light.

9.sub_metering_3: energy sub-metering No. 3 (in watt-hour of active energy). **It corresponds to an electric water-heater and an air-conditioner**.

Attribute Information (left to right):

1.date: dd/mm/yyyy

2.time: time in format hh:mm:ss

3.global_active_power: household global minute-averaged active power (in kilowatt)

4.global_reactive_power: household global minute-averaged reactive power (in kilowatt)

5.voltage: minute-averaged voltage (in volt)
6.global_intensity: household global minute-averaged current intensity (in ampere)

7.sub_metering_1: energy sub-metering No. 1 (in watt-hour of active energy). It **corresponds to the kitchen**, containing mainly a dishwasher, an oven and a microwave (hot plates are not electric but gas powered).

8.sub_metering_2: energy sub-metering No. 2 (in watt-hour of active energy). It **corresponds to the laundry room**, containing a washing-machine, a tumble-drier, a refrigerator and a light.

9.sub_metering_3: energy sub-metering No. 3 (in watt-hour of active energy). **It corresponds to an electric water-heater and an air-conditioner**.

```

Attribute Information (left to right):

1.date: dd/mm/yyyy

2.time: time in format hh:mm:ss

3.global_active_power: household global minute-averaged active power (in kilowatt)

4.global_reactive_power: household global minute-averaged reactive power (in kilowatt)

5.voltage: minute-averaged voltage (in volt)
6.global_intensity: household global minute-averaged current intensity (in ampere)

7.sub_metering_1: energy sub-metering No. 1 (in watt-hour of active energy). It **corresponds to the kitchen**, containing mainly a dishwasher, an oven and a microwave (hot plates are not electric but gas powered).

8.sub_metering_2: energy sub-metering No. 2 (in watt-hour of active energy). It corresponds to the laundry room, containing a washing-machine, a tumble-drier, a refrigerator and a light.

9.sub_metering_3: energy sub-metering No. 3 (in watt-hour of active energy). **It corresponds to an electric water-heater and an air-conditioner**.

4.global_reactive_power: household global minute-averaged reactive power (in kilowatt)

5.voltage: minute-averaged voltage (in volt)
6.global_intensity: household global minute-averaged current intensity (in ampere)

7.sub_metering_1: energy sub-metering No. 1 (in watt-hour of active energy). It **corresponds to the kitchen**, containing mainly a dishwasher, an oven and a microwave (hot plates are not electric but gas powered).

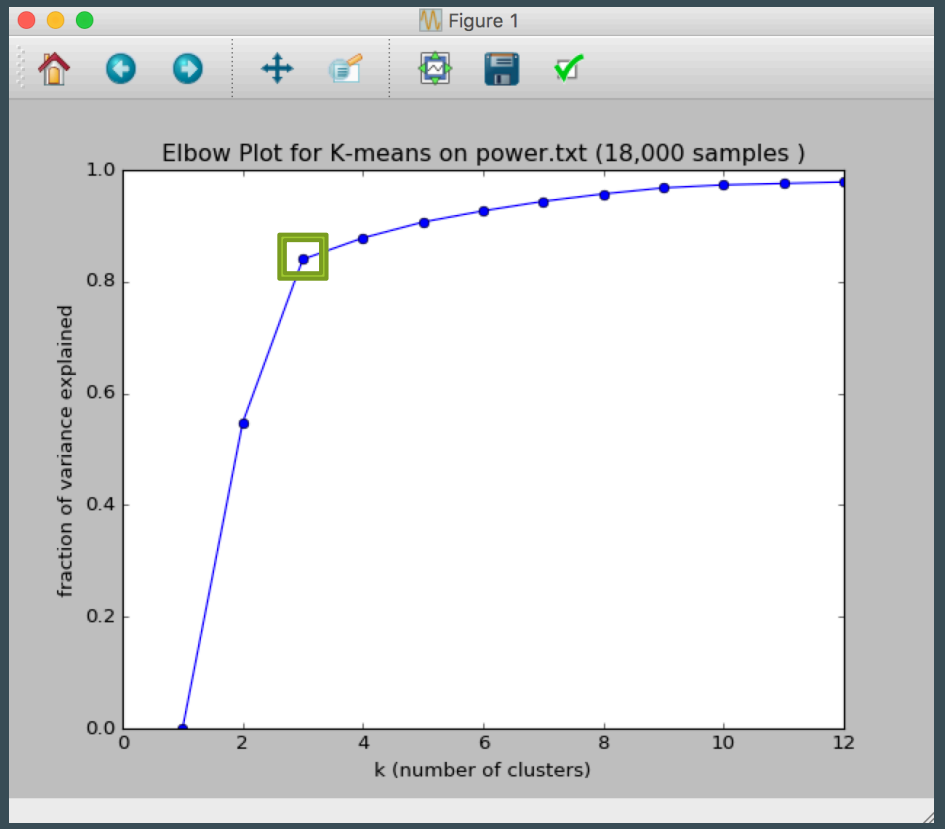
8.sub_metering_2: energy sub-metering No. 2 (in watt-hour of active energy). It **corresponds to the laundry room**, containing a washing-machine, a tumble-drier, a refrigerator and a light.

9.sub_metering_3: energy sub-metering No. 3 (in watt-hour of active energy). It corresponds to an electric water-heater and an air-conditioner.

Methods

- Pre-processing data
  - For K Means and PCA had to ignore certain features in order for them to work
    - Ignored 1st and 2nd features of the data set
    - Date and time
  - As mentioned earlier, some dates contained missing values for the sub measurements.
    - If there was data missing, was replaced by '?'
    - Need to remove the row altogether if a '?' is present
- K-means
- PCA

Results



From Elbow Plot, k chosen was 3

Future work

- I plan to interpret the data in terms of day vs night
- Using class markers to plot data
- Want to divide up data into months
- Finding peak times in energy consumption

Thank you !

- comments / questions / suggestions?
